

ABSTRACT

A holding device (4) for ice-cream cones (2) and made of paper, cardboard, plastic or of a laminate consisting of these materials, the holding device (4) including a holder part (6) with a circular opening (8) which is adapted for receiving a cornet or a cone (2) with edible ice, e.g. soft ice, the holding device (4) being designed with a projecting support member (10) at a side of the opening (8), where the support member (10) is designed with a straight edge part (12) spaced apart from the opening (8) and extends perpendicularly relative to a centre axis through the support member (10) and the opening (8). In a simple way and by means of the holding device according to the invention it is hereby possible to place a cornet or a cone filled with ice-cream, e.g. soft ice, on a plane base, e.g. a counter or a table. It is thus necessary to have disposal of current holding devices with a number of holes for accommodating a corresponding number of filled ice cones. In a simple way, the straight edge part of the support member prevents the holding device with a cornet or cone filled with ice-cream from turning over or rolling around.
